

The Cornerstone Church Technology Ministry

Throughout the history of the church, technology has played a critical role in spreading the gospel. Rome's mechanical technology developed machines that created roads which made it possible for Christians to travel from city to city spreading the gospel. Print technology of the 19th century gave us the printing press which made it possible for the mass production of the Bible in virtually every language. Audio and video technology of the 20th century gave us the satellites, radios and televisions that brought the gospel to the mainstream. Today the Internet, the latest product of information technology, has taken the ministry to the next level.

Pastor Rick Warren of Saddleback Church (Lake Forest, CA) said, "Every time there is an advance in technology, The Kingdom advances." Technology has a huge impact on our mission - not the 'what' of our mission, but the 'how'.

Our Mission is to use current and emerging technologies to assist the Cornerstone Church in spreading the gospel in an effective manner.

Jesus commanded the disciples to go into all the world and preach the gospel to all creation. The disciples carried out his command by traveling from city to city preaching the Word on street corners, hill sides and any place. Centuries later, the mission is the same, however technology has changed the methods. Christians used radio and television to reach millions with the gospel. Then, the Internet became an evangelistic tool. Today Christians are meeting online to pray, worship, study the Bible, and evangelize. We should therefore go into the world wide web and email, post, chat and stream the gospel to every everyone.

Mark 16:15 He said to them, "go into all the world and preach the gospel to every creature."
